

DEBAR FLAVIEN

• Senior Platform & DevOps Engineer •

AWS • Kubernetes • Terraform • Helm • GitOps • CI/CD • OpenTelemetry

PROFILE

DevOps Engineer, specialized in designing and industrializing cloud infrastructures and CI/CD pipelines. AWS and Kubernetes expert, passionate about automation, system reliability, and optimizing time-to-market. Proven experience in migrating legacy infrastructures to cloud architectures and in guiding development teams on DevOps best practices and Infrastructure as Code.

Experienced in distributed environments and fully remote collaboration with international teams.

EXPERIENCES

Docebo — Systems & Platform Engineer (March 2021 – March 2026)

- Designed and built a standardized, self-service GitLab CI/CD platform based on reusable components, enabling teams to progressively build their pipelines without reimplementing CI/CD workflows; integrated SAST, DAST, SonarQube, SBOM and container scanning with Trivy to enforce a shift-left security approach.
- Designed and industrialized an AWS-based Platform Engineering platform operating across a multi-account (~20 AWS accounts) and multi-region environment, with approximately 50 EKS clusters supporting multiple product teams (~160 users).
- Designed and developed features for an internal Go-based CLI framework, enabling development and operations teams to automate AWS infrastructure operations through an orchestrator/agent architecture distributed across approximately 50 EKS clusters and multiple AWS accounts.
- Industrialized the deployment and operation of Amazon EKS clusters using Terraform and FluxCD; managed Kubernetes upgrades and node groups, and led the progressive migration towards Karpenter.
- Implemented a GitOps architecture with FluxCD, enabling declarative and reproducible deployments across multiple environments (dev, staging and production).
- Automated the provisioning of new EKS clusters and associated services, significantly reducing the time and manual effort required to create and bring new platforms into production.
- Standardized and automated critical infrastructure operations, including database scaling and service provisioning, reducing manual intervention time and the risk of operational errors.

Docebo - Lead developer (Nov. 2020 – March 2021)

- Migrated and adapted CI/CD pipelines during a transition from bare metal to cloud and Bamboo to GitLab CI/CD, ensuring minimal downtime and reliable deployments.
- Industrialized and automated the AWS infrastructure using IaC (Terraform).
- Designed and implemented event-driven services using AWS Lambda and EventBridge, enhancing system responsiveness and decoupling.
- Worked cross-functionally to define and implement technology and infrastructure strategies, aligning with business and engineering goals.

Formetris - Lead developer | Company acquired by Docebo (Nov. 2018 – Nov. 2020)

- Led the design and development of application features using PHP and ReactJS within a containerized environment.
- Built and mentored the technical team, fostering software craftsmanship practices (TDD, pair programming, clean code) within a hexagonal (DDD) architecture.
- Drove the transformation of a monolithic application into a microservices architecture.
- Facilitated meetings and drove Scrum ceremonies.

DEBAR FLAVIEN

PERSONAL PROJECTS

KubeSage – Plateforme d'analyse d'incidents Kubernetes assistée par IA

- Analyse automatique des incidents Kubernetes
- Intégration Prometheus, Loki, Tempo et OpenTelemetry
- Déploiement GitOps avec Helm et ArgoCD
- Backend : Python (FastAPI)
- Frontend : React
- Infrastructure : Kubernetes, AWS, Terraform
- GitHub : github.com/fdebar/kubesage

SKILLS

- Cloud & Infrastructure: AWS (ECS, EKS, RDS, Lambda, EventBridge, AWS Secrets Manager...), Terraform, Ansible
- Orchestration & Security : Kubernetes, Docker, Helm, FluxCD, Grype, Trivy
- DevOps & CI/CD: GitLab CI/CD, pipelines automatisés, shift-left testing
- Software Architecture : Architecture hexagonale, DDD, Design Patterns, Tests (integration / end to end), TDD, Microservices
- Observability & Data: Datadog, ELK, Amazon Cloudwatch
- Programmation Langage : PHP, ReactJS, Angular, Bash, GoLang
- Project management: Méthodes agiles (SCRUM), Jira, Confluence
- Language: English (B2)

VOLUNTEERING

Protection Civile - First aider (Sept. 2024 – Sept. 2025)

- Participation in emergency response plans during public events
- First aid intervention

EDUCATION

Cergy-Pontoise University

Bachelor's Degree in Web & Mobile Web Development | 2013 - 2014

IPSSI School (IP-Formation)

Apprenticeship contract | 2012 - 2013

INTERESTS

- Reading: Science fiction and essays on social issues
- Sports: Rock climbing, hiking, scuba diving
- Travel: Multicultural environments and working in international teams; living between France and Thailand
